Bendri principai

- Eksperimentai dažniausiai baigiasi blogai
- Venkite kodo duplikacijos (DRY principas)

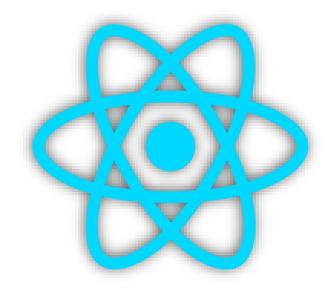

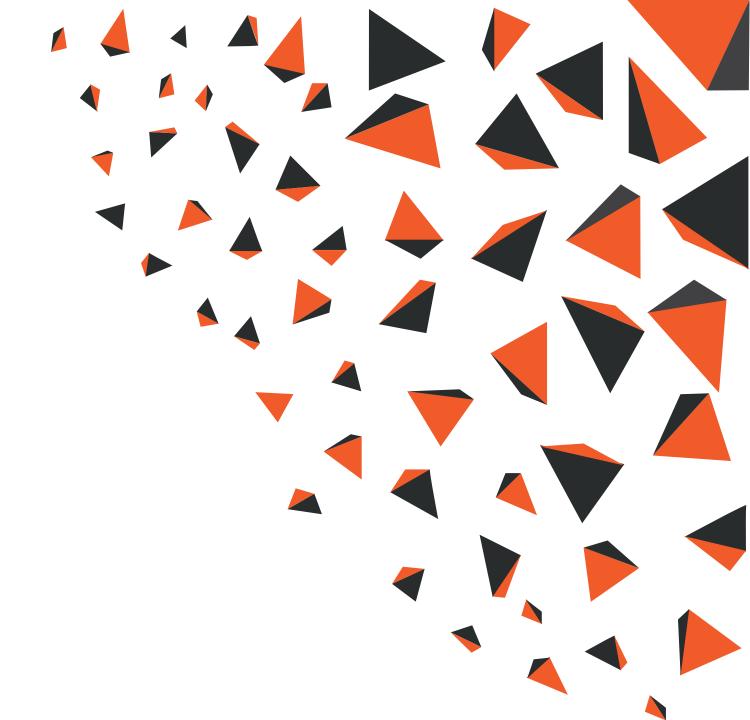

Funkcijos

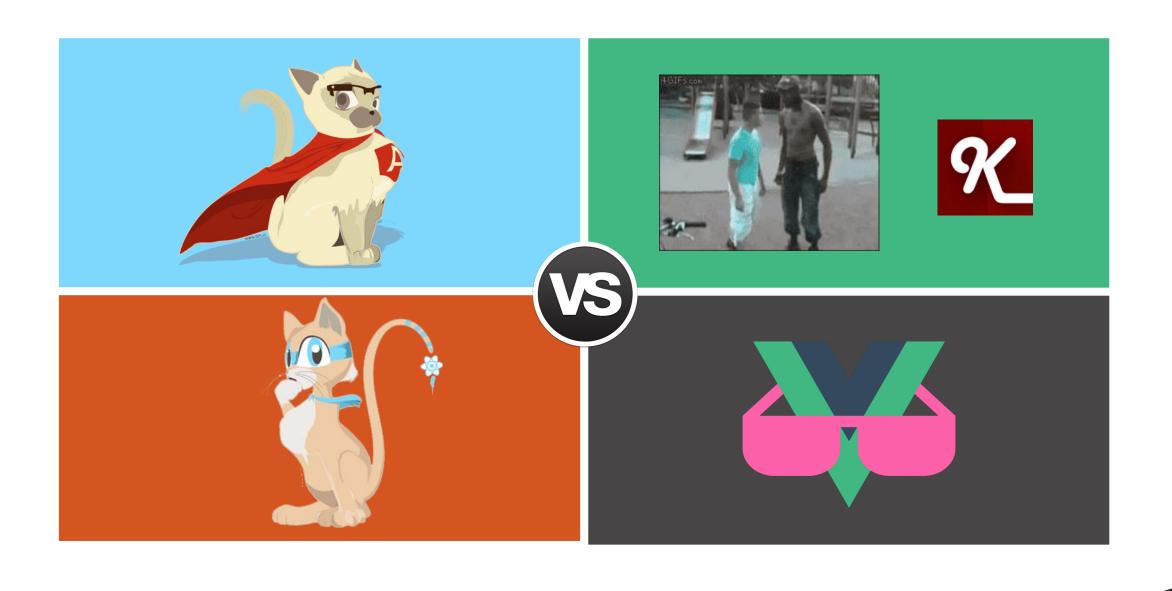

- ◆ Trumpos ir daro vieną dalyką. Jeigu funkcija daro daugiau negu vieną dalyką – skaidyti.
- Venkite paduoti boolean per paramterus. Toks parametras dažniausiai išduoda, kad funkcija daro daugiau negu vieną dalyką.
- Kuo mažiau parametrų, idealiu atveju neturi viršyti 3.
- Funkcija turi atsakyti į klausimą arba daryti kažką, bet ne abu.
- Venkite null kaip grąžinamos reikšmės. Null nesuteikia jokios papildomos informacijos.

React

- ◆ A JavaScript library for building user interfaces
- ◆ Facebook, 2013
- Component based
- Virtual DOM
- Jsx

Virtual DOM Real DOM Patch In-memory DOM

JSX

 Sintaksės plėtinys, kuris leidžia naudoti HTML ir js kartu

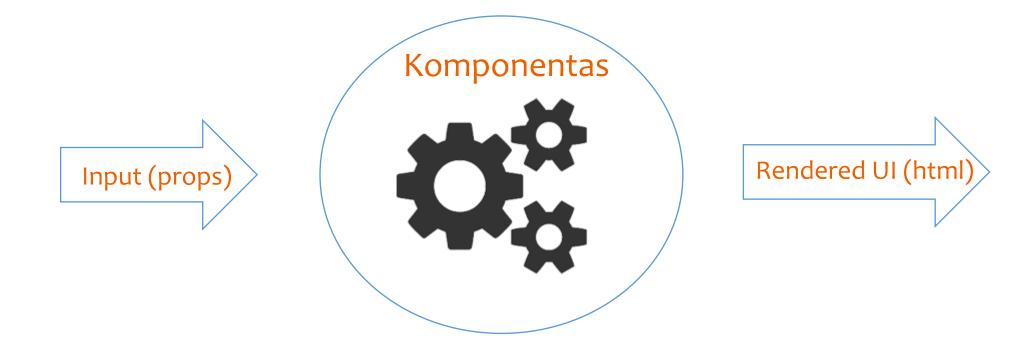

```
const header = <h1>Hello, Academy</h1>;
```

```
let name = "Ernestas";
header = <h1>{name}</h1>;
```

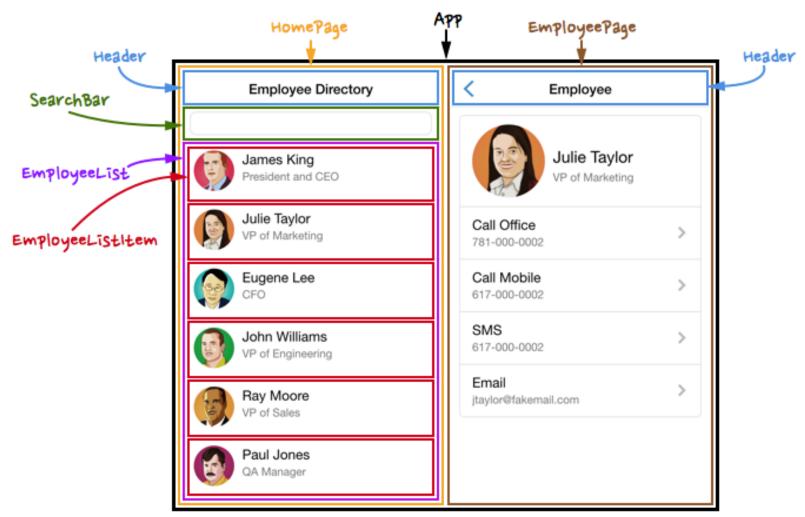

JSX

```
let attribute = "class";
header = <h1 className={attribute}></h1>;
```

Komponentai

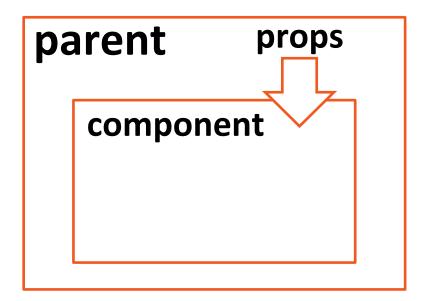

Komponentai

props

- Skirta pernešti informaciją tarp komponentų
- Read only (komponentas niekada nemodifikuoja savo props)
- Jeigu tėvo komponentas pakeičia props, child komponentas automatiškai persipiešia

props destructuring

 Leidžia ištraukti tam tikras dalis iš objekto ar masyvo

```
<Children name="Jonas" surname="Jonaitis"></Children>
```

props rest parameter

 Leidžia paduoti visus parametrus gilyn komponentų medyje.

```
<Children name="Jonas" surname="Jonaitis"></Children>
```

Funkciniai komponentai

```
import React from 'react';

function Welcome()

{
    return <h1>Hello, Academy !</h1>;
}

export {Welcome}
```

```
import {Welcome} from 'path';
<Welcome />
```

Funkciniai komponentai

```
function WelcomeWithProps(props)
{
    return <h1>Hello, {props.name} !</h1>;
}
```

```
<WelcomeWithProps name={"Ernestas"} />
```

Class komponentai

```
class Academy extends Component
{
    render()
    {
        return <h1>Hello academy</h1>
    };
};
```

<Academy />

Class komponentai

```
class AcademyWithProps extends Component
{
    render()
    {
        return <h1>Hello, {this.props.name}</h1>
    };
}
```

```
<AcademyWithProps name={"Ernestas"} />
```

Component lifecycle

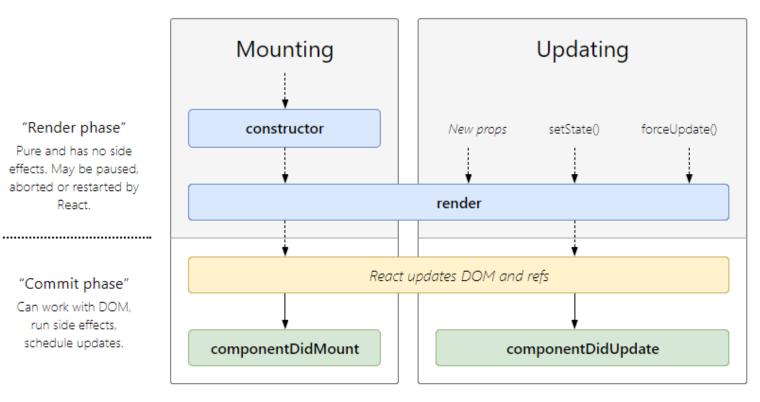

https://reactjs.org/docs/react-component.html

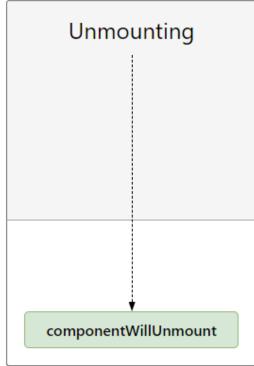

"Render phase"

Pure and has no side effects. May be paused, aborted or restarted by React.

"Commit phase"

Can work with DOM, run side effects, schedule updates.

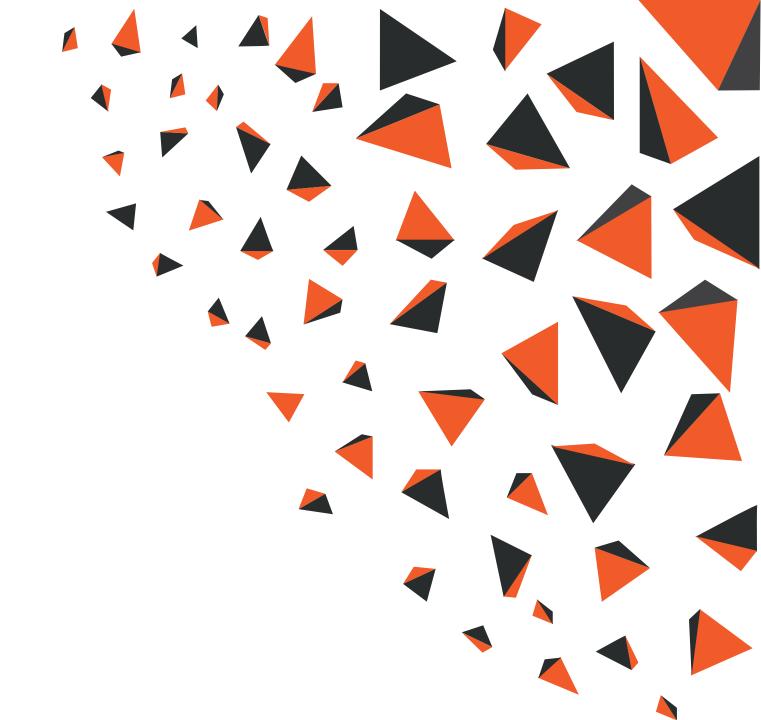

Instaliacija

- From scratch arba į egzituojantį projektą
 - npm init
 - npm install react react-dom
- Projektas su standartiniu funkcionalumu
 - npx create-react-app appname
 - cd appname
 - npm start

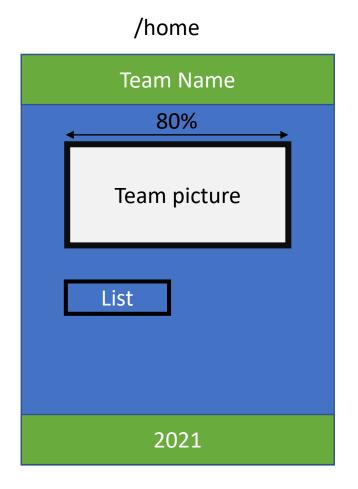

DEMO

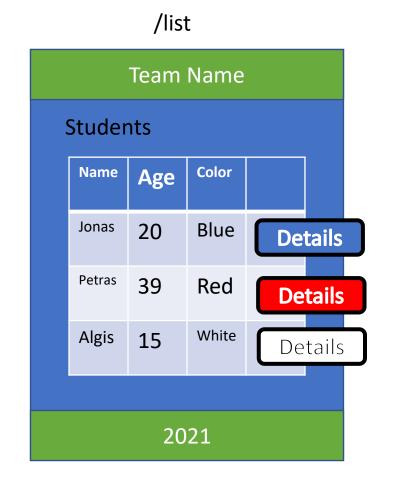

- 1. Visų mygtukų font-size 40px
- 2. Visų mygtukų onClick -> console.log(name)

Workshop

Background color priklauso nuo item color

Namų darbai

- Pasidarom visus puslapius savo projekto (jau gali būti su stiliais)
- Pasidarom layuout, menu ir t.t. Kol kas jokių call'ų į duombazę jokių extra stuff.
- → Jeigu turit puslapius su listais galit naudoti fake duomenis kuriuos galima sugeneruoti iš : https://mockaroo.com/
